

- (A) Sloped shorelines, allow storm water to rise, allow wave energy to disperse
- (B) Heavy dune grass vegetation promotes wild life habitat, helps retain sands in wind and water, tempers wave movement, provides natural filter
- (C) Significant use of indigenous plant species provides wild life habitat, natural ecosystem, natural filter and buffers between human and wild life.
- (E) Pesticide free, low water reliant lawn areas with controlled rain water run off, protects ground water, wildlife and human habitants.
- (J) Rock Jetties: Provides additional erosion control, disperse wave energy
